

# Median number of days to long-term care home placement (community) (Retired)

## Alternate Name\*

Wait time to long-term care home placement (community)

## INDICATOR DESCRIPTION

---

### Description\*

This indicator measures the median number of days residents waited to be placed in a long-term care home from the date of long-term care home application or consent to the date of placement, whichever is longer.

### Indicator Status\*

Active

### HQO Reporting tool/product

### Type\*

Process

## DEFINITION AND SOURCE INFORMATION

---

### Unit of Measurement\*

Days

### Calculation Methods\*

The median time, in days, for each included placement from the earlier of long-term care home application date or consent date to date of placement. The median is the number of days within which 50% of individuals waited from the date of application or consent to the date of placement.

The median time can be stratified by location of the individual prior to placement (e.g., placed from hospital or placed from community).

The median is calculated for the following placements for this indicator:

#### Placed from community

##### Inclusions:

- All residents placed from the home, retirement homes, and supportive housing only

##### Exclusions:

- Residents for whom "Admitted from" and/or "Prior Location Code" is unknown

### Numerator including inclusion/exclusion\*

N/A

### Caveats and Limitations

The wait time for long-term care placement is measured among individuals who have been placed into long-term care, so does not capture individuals who are waiting for long-term care but die or find alternative arrangements before receiving long-term care home accommodation. This indicator does not include the wait time for individuals transferring from another long-term care home.

### Comments Detailed

\*\* This indicator is retired for 2020/21 \*\* This is a QIP priority indicator for 2019/20. QIP Current performance reporting period: April 2016 - March 2017. To access your organization's data for the reporting period, refer to Health Quality Ontario's QIP Navigator. Data will be available in February 2019. Alternatively, these data can be gathered from Health Quality Ontario's Wait Times for Long-Term Care Homes. The results by Local Health Integration Network (LHIN) region represent the median of the wait times for residents placed within a LHIN region – i.e., the result is the median of the wait experienced by residents by the LHIN region where the placement occurred (based on location of the long-term care home) regardless of their prior location. The median was chosen as a summary measure because the overall distribution of wait time is highly skewed by very long waits.
