

# Antipsychotics for at Least 90 Days: Percentage of residents aged 66 and older diagnosed with dementia, without psychosis, who were prescribed an antipsychotic medication for at least 90 continuous days

#### Alternate Name\*

Antipsychotics for at Least 90 Days: Percentage of residents aged 66 and older diagnosed with dementia, without psychosis, who were prescribed an antipsychotic medication for at least 90 continuous days

# INDICATOR DESCRIPTION

## **Description\***

This indicator measures the percentage of Long-Term Care residents diagnosed with dementia but not diagnosed with psychosis, who had an antipsychotic medication dispensed for at least 90 continuous days measured from the last date of contact in the reporting period.

#### Type\*

Outcome

# **DEFINITION AND SOURCE INFORMATION**

#### **Unit of Measurement\***

Percentage

#### Calculation Methods\*

Number of residents with an antipsychotic medication dispensed for at least 90 days divided by the total number of residents who were older than 66 years of age, not new to the Long-Term Care home, not in palliative care, and who were diagnosed with dementia without psychosis. This is multiplied by 100.

### Numerator (short description i.e. not inclusions/exclusions)\*

The number of residents diagnosed with dementia without psychosis who had antipsychotic medications dispensed (with Long-Term Care flag) during 90 days preceding the index date (a resident's last service date in the quarter).

# Denominator (short description i.e. not inclusions/exclusions)\*

The total number of residents in the OHIP/ODB cohort for the reporting period who are aged 66 years and older, who were diagnosed with dementia, without psychosis, were not new to the Long-Term Care home, and were not in palliative care.

## Adjustment (risk, age/sex standardization)- generalized

None
