Comments Detailed

This is a QIP priority indicator for 2018/19. QIP Current performance reporting period: April - March the following year
How to access data: refer to Health Quality Ontario's QIP Navigator, data will be available in February 2018. For this indicator, "palliative care patient" is defined as an individual who was admitted as an inpatient with a palliative care indication. The indicator is reported at the level of admissions rather than unique patients, thus could capture multiple admissions per patient. For this indicator, 'Discharged home with support' and 'Discharged home without support' are derived from the following definitions from the CIHI DAD database: Home with Support (Discharge Disposition = 04): Discharged to home or a home setting with support services (senior's lodge, attendant care, home care, meals on wheels, homemaking, supportive housing, et cetera) a. Example of discharged to a home setting with support: A facility where supervisory care is not required on a continuing basis. A patient is discharged and is able to function independently within a group setting. This indicator was retired in the 2019/20 QIP.
